The BioProcess to Product (BioP2P) Network is an initiative of the California Biomanufacturing Center aimed at supporting the biomanufacturing community in the United States for the growing bioeconomy. A central mission of the BioP2P Network is to develop a national inventory of validated, scale-up facilities that serves as a free resource to the biomanufacturing community, www.biomanufacturing.net/the-directory/

This searchable directory allows developers to readily identify and partner with toll manufacturing facilities as they move from bench to commercial scale production. The BioP2P Network also provides a platform to showcase additional resources for the biomanufacturing community such as regional training and workforce programs, maps to feedstocks, innovations in technology and a career center. The BioP2P Network is supported by Schmidt Futures, a philanthropic initiative of Eric and Wendy Schmidt. Stop by our Booth #32 to learn more, and sign up on our website to follow our progress. www.biomanufacturing.net/join/
